

DCLABS

# DCSERVER II

The network boss that is engineered for hard working businesses.

Does more for your money

Manages your Internet and network

Most secure server on the market

Over 400+ across Australia and Overseas

More features

Proud Australian

**24x7** Monitoring  
Support

**DCLABS is one of Australia's largest Remote Managed Server companies with over 400+ DCSERVERS across Australia and Overseas. Operating since 1999.**

*With a DCSERVER II you have immediate access to perhaps the best qualified Server engineering team in Australia (the majority having PhDs and Masters degrees). Yours to command!*

*The DCSERVER utilizes new security technology developed by the National Security Agency (NSA) to make it Australia's most secure server. DCLABS harnesses the power of OpenSource software and our own developed software to provide customers with unlimited user licences and advanced features.*

## Major Features

New Virtual Server technology allow you to host multiple businesses or perhaps .. let your kids play with their own 'server' without affecting your business!

Detailed automatic reporting audits your employees web surfing, email usage, DCSERVER file and network usage and more ...

Manage unlimited email addresses, anti spam features, anti virus, auto email backup, vacation, web mail.

Control your network! Firewall, DHCP, DNS, NTP, LDAP, MySQL, SMB, SNMP, VPN , and many more...

Windows, Macintosh, Linux networking compatible.

New Security Enhanced Operating System. Gives your server extra layers of protection.

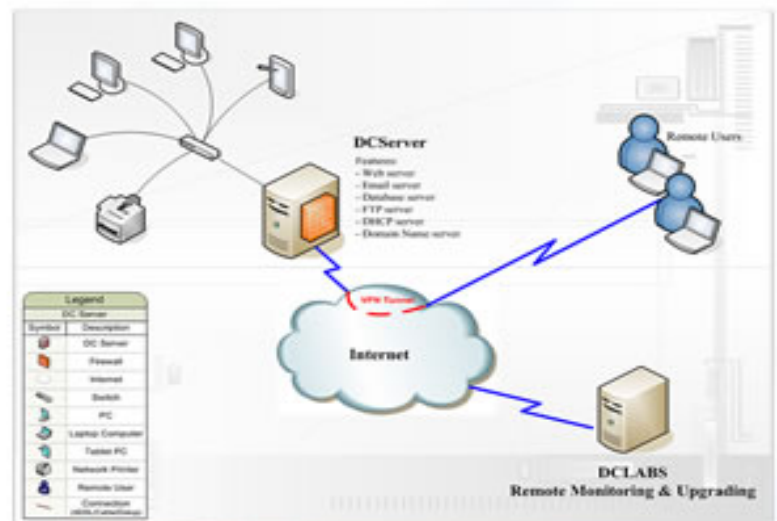

New Unique Rescue CDROM permits internet operation and network management for all users.

New Unique DCAdmin Windows, Linux, Macintosh software permits easy management of your network without needing clumsy web tools.

Serve your own web sites. A pretty web page is supplied with every DCSERVER along with many web tools.

DCLABS unique 24x7 constant monitoring alerts you to internet outages and other network issues via fax/sms/email/DCAdmin.

Terminal Server operation permits users Workstations to operate full featured desktops without needing a hard disk.
